## PROJECTS

### Buddystock

- Designed, developed, and implemented this responsive website from prototype to launch, including providing ongoing support per the client's needs
- Managed the project from conception to completion, collaborating with the client to ensure the website met their branding and user experience goals
- The website can be viewed [here](#).

### Collabo

- A browser-based JavaScript application that uses Supabase and the Web Audio API to bring remote collaborative song-writing to the public
- Realized a production-ready application for delivery to potential stakeholders on a one-week sprint deadline
- Orchestrated a backend for this application by synthesizing the front end with a PostgreSQL database instance

### Tallyho!

- Harnessed the Google Maps API, to develop this web application that allows users to create road trips
- Integrated displaying time and distance with each route, as well as a drag-and-drop feature in the route list

## SUMMARY

I am a diligent, and discerning individual who thrives in collaborative environments. As a musician, I developed strong skills in creative problem-solving and attention to detail. As a legal assistant, I gained valuable experience in project management, research, and communication. I am committed to leveraging my diverse set of skills into intuitive, user-focused software solutions. My technical skills and background make me a well-rounded individual who can approach problems from multiple angles and provide innovative solutions.

## SKILLS

JavaScript	Python	React
SQL	Postgres	Webpack
Jest	Express	HTML/CSS

## WORK HISTORY
