SUMMARY

I am a dynamic and solution-focused Full Stack Software Engineer with a track record of delivering impactful applications. My strengths include resilience, an analytical mindset, and patience, and I thrive when working independently and in collaboration with others.

PROJECTS

Pantry Pal
- Harnesses the Google Maps API, to geolocate users on load
- Displays the information of over 2,500 organizations providing free food in the continental U.S.
- Pulls custom data from MongoDB to display organizations based on user location

Buddystock
- I designed and developed this website from prototype to early deployment
- Integrates features based on client specifications, including deployment through Cpanel
- Used git version control to update the client about the status of the project asynchronously

Collabo
- Brought to production by myself and four other developers in a one-week sprint
- Browser-based vanilla JavaScript application that harnesses the Web Audio API
- Brings remote collaborative songwriting to the public

SKILLS

- Full Stack Development
- TypeScript/JavaScript
- React
- HTML/CSS
- SQL/NoSQL
- Python
- NodeJS
- RESTful APIs
- Git Version Control
- TailwindCSS
